

The Northwoods Series Cabin

Our Northwoods Series is the most impressive pre-manufactured recreational cabin on the market today. With a height of over 16', we tower over the competition. From the ground up these cabins are built with quality and craftsmanship in mind. Starting with the 4x6 treated floor joists, then a layer of exterior grade 3/4" plywood, 1" rigid foam, another layer of 3/4" interior grade plywood, then finally your tongue and groove flooring. Our walls are 100% solid Eastern White Pine Logs which we source locally. We then set our 3x5 timber rafters and double ridge beam, top that with 1x8

tongue and groove pine to add that beautiful wood cathedral ceiling. Now we add 1 1/2" rigid foam insulation and top it with a 50 yr. Metal roof. The Northwoods series Cabin On the inside, you can choose log rails and trim or rustic timber. Our stairs feature storage in every conceivable space. Full standing height lofts with plenty of space for a bedroom, sitting area, or game room. The second loft above the porch can be accessed by a ladder, and you can connect the two lofts with a catwalk. These cabins are great for camps, second properties, perfect for campgrounds, getaway properties, lakefront properties, riverfronts, rentals, or simply the coolest backyard man-cave/she-shed ever. These cabins are built to order, which means you get to pick your features, colors, and styles, and then we put it all together, build it and ship it to your prepared site. Once on-site it takes between 4 and 8 hrs to set up and prepare your cabin for you. You or your local contractor can then make any necessary utility connections. Your Northwoods series Cabin will come with an owner's manual that will help you learn about and maintain your cabin for years to come. The Cabin pictured here is a 14'x 24' platform, 6' covered porch with a 6'x 13' loft above on the inside, 18'x 13' cabin with an 8'x 13' loft above, this one is outfitted with a kitchenette and was brought in as a primitive unit, then the electric was added on-site in painted conduit. The typical cost

of a pier foundation---\$2500.00 Skirting and steps to conceal
the bottom--\$600.00 Kitchenette(with cabinet's and
countertop)---\$1200.00 Electric added after delivery (by you
or your electrician)-\$2500.00 Total costs as you see it here
\$32,000.00

Starting at \$25,200.00
